

Appendix 2

Research design for participating in the contest of research projects “New Technologies in 24-hour Ambulatory Blood Pressure Monitoring”

1. Project title (in English).
2. Contest direction (choose the appropriate direction):
 - new approaches to making the monitoring and further data interpretation;
 - new spheres of 24-hour ABPM method application;
 - new approaches to using the 24-hour ABPM in diagnostic and estimation of treatment efficiency.
3. Key words (notice not more than 15 words and phrases which characterize the content of the project, lowercase, comma separated).
4. Concrete task, the decision of which the project is aimed to.
5. Methods and approaches, offered by the author (must contain the novelty estimation; the global plan for the whole period of realizing the project).
6. The estimated year results (the full description with the estimation of originality grade; the form must allow to make the expert examination of the results).
7. Current state of the studies in the chosen branch, correlation of the project with it.
8. Available scientific backlog for the offered project: got earlier results, developed methods (with novelty estimation).
9. List of the main publications, which refer to the planned project.
10. Main executors.
11. Terms of realization (year of the beginning – year of the termination).
12. Place of realization.
13. Signature of the main executor.
